Overview

ABSTRACT
The Labour Force Survey (LFS) is a statistical study of the households selected by the appropriate method. The objective of the survey is providing information on not only well-known employment and unemployment as well as providing comprehensive information on other standard indicators characterizing the country labour market.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
- Households

- Individuals

Scope

NOTES
The survey covers the following topics:

- employment;

- informal employment;

- working hours, income and remuneration of work;

- non-working employees;

- temporary employed;

- status of employment;

- employees that have the second job;

- unemployment;

- economically inactive population.

Sampling

Sampling Procedure

A two stage stratified sample by regions (marzes) has been designed to conduct the survey. The method of systematic probability sampling was used to frame the sample. Yerevan and all marzes with rural and urban settlements were covered by sample population with proportion of all HH available in these strata. Based on the administrative and territorial division of RA at the first stage of sampling, the preliminary sampling units, i.e. enumeration areas were selected. 2001 Armenian Population Census results were used to calculate the mentioned proportions.

At the second stage of sampling the primary sampling units, that are HHs to be surveyed, were randomly selected. As a result, during the year have been surveyed 7 680 HHs (monthly 640 HHs), of which 5 160 urban and 2 520 rural areas.

At the same time a reserve sample was selected by the same steps, because it was anticipated that in most cases the questionnaire may not be completed due to household's refusal to participate in the survey, absence from the republic or other reasons. As a result, the HHs not participated in the survey were replaced from the reserve sample. The selection of households (HH) has been done monthly by the rotation principle.

Questionnaires

Overview

The design of the questionnaire, used concepts, set of indicators and calculation methodology, sampling method basically comply with the definitions and concepts recommended by the ILO and Eurostat, while taking into account the peculiarities of their application in Armenia to the extent possible, at the same time, by providing the comparability with the international similar indicators.
